PRESS RELEASE: FOR IMMEDIATE RELEASE

###

Westfield Water System Improvements

The Middletown Water Department is pleased to announce that the Westfield Water Main Extension Project is approaching completion. The new pressure zone will begin its operation on or about **June 19th 2012**. The activation of the new pressure reducing vault on the corner of Country Club Road and Middle Street will utilize water from the Cimmaron Road Water Tank in the Higby High Service Area and will have the effect of increasing the pressure to the new Westfield Intermediate Pressure Zone. The new pressures zone consists of Middle Street and streets to the west of Middle Street. The new Westfield Intermediate Pressure Zone will have an increase in pressure of approximately 15 psi. Due to elevation differences in this zone the pressure varies from a low pressure of 35 psi to a high of 125 psi. Residents with pressure above 80 psi may want to install a pressure reducing valve of their own. Also, residents with pressure below 40psi may want to keep their booster pump in operation if deemed desirable as a personal preference. Contact your plumber in order to review your particular situation.

###

If you have any further questions, you can call the Water Department at 343-8085 and speak with our Engineering Division at extension 152. If you wish to speak directly to the Director, Mr. Guy Russo, please choose option #2 on our phone system.
